OrionNET™ 1.1 Software Enhancements

- Monitors forces, fatigue, and limits in real time when used in conjunction with Cerberus™ v. 9.0
 - Supports duplicate channel names across data-engine sources in a single configuration
 - Imports Orion 8.0 databases and configurations
 - Imports / exports OrionNET configurations
 - Appends newly acquired data to an existing OrionNET database
 - Exports job-log data to a CSV file
 - Imports EMU files
 - Using the standard OrionNET installation, acquires data from the Direct V2 controller (Orion III), as well as from the previously available sources:
 - Orion Ultimate I/O controller (Orion IV)
 - CTES Orion Network
 - ASCII via Serial
 - Derived Channels
 - View Designer enhancements include:
 - Copy/paste a selected control using menu-bar functionalities or CTRL-C / CTRL-V
 - “Snap to” grid functionality
 - Acknowledges alarms and warnings
 - Dynamically applied configuration changes – no need to restart Acquisition
-
